Python data structure - dictionary

Dictionary is defined as key and value pair:

```
knights = {'gallahad': 'the pure', 'lancelot': 'the brave'}
```

To add to a dictionary:

```
knights.update({'robin': 'Not-Quite-So-Brave-As-Sir-Lancelot'})
```

Python data structure - dictionary

Dictionary

```python
knights = {'gallahad': 'the pure', 'lancelot': k'the brave'}

for k, v in knights.items():
    print(k, v)

to just print the keys:
for k in list(knights.keys()):
    print k
```
