Python Function

to define a function:

```python
def areaOfCircle(r):
    area = 3.14 * r**2
    return area
```

to use a function:

```python
a = areaOfCircle(5)
print("The area of circle is: ", a)
```

Python Function

to define a function of finding the larger one in 2 numbers:

```python
def maxOfTwo(num1, num2):
    if num1>num2
        return num1
    else:
        return num2
```

Exercise: define a function of finding the max of three numbers.
